Brooks and Dunn Tribute

Let's Talk About Recycling

Recycling is one of the easiest, most tangible ways of taking action for the planet. It's a visible demonstration of caring and conservation, and it sets a positive example for children, families and communities.

Recycling is a feel-good activity...

But it does much more...

- Recycling saves energy
- Recycling prevents pollution
- Recycling creates jobs
- Recycling saves money

Recycling is an important step to undertake for preserving our planet by reducing environmental pollution and conserving energy.

Let's Talk About Recycling (cont.)

Did you know....

- **Glass bottles** become new glass bottles.
- **Aluminum cans** are turned back into aluminum cans, and can be recycled almost indefinitely.
- **Steel cans** are used in other steel products such as car parts and construction materials, and can also be recycled over and over again.
- **Plastic bottles** are recycled into carpet, clothing, auto parts, and new bottles.
- **Paper** is recycled into new paper. Some grades of paper can be recycled up to seven times.
- **Nearly 90% of what we throw away could potentially be recovered through reuse, recycling or composting.**

If you're not already recycling, contact your waste management company and ask how you can do your part to help our environment!

Happy Father's Day!

A little Father's Day history...

Father's day was first recognized by Mrs. Sonora Smart Dodd (now known as "the mother of Father's Day") whose father had as a single parent, raised his six children. She conceived the idea of celebrating Father's Day while she was listening to a Mother's Day sermon in 1909. The first Father's Day was celebrated on June 19, 1910.
